Density Meter Calibration Request Form

Please note that density meter calibration cannot commence until the following form has been completed and returned. Email: admin@density.co.uk

Your Details	
Company:	
Purchase Order #:	
Density Meter Serial #:	

Calibration Range

To achieve the best performance from a density meter it should be calibrated over the density range which it is used, rather than over the full range which it is capable of measuring.

Please indicate which density range(s) your density meter is used over:

Low 692 to 998kg/m^3	e.g. hydrocarbons, oils, light solvents	Yes ☐	No ☐
High 998 to 1623kg/m^3	e.g. water, aqueous solutions, battery acids, heavy solvents	Yes ☐	No ☐

Safety Information

Has the density meter been used to measure any of the following:

Blood, body fluids, pathological specimens or other biohazards	Yes ☐	No ☐
Chemicals or substances that are hazardous to health	Yes ☐	No ☐
Radioactive sources	Yes ☐	No ☐
Other hazards	Yes ☐	No ☐

If the answer to any of the above questions is 'Yes' please provide details of any residual contamination that may be present and the appropriate health and safety data sheets.

Please be aware that if your density meter needs to be cleaned before calibration then additional charges will apply. Your density meter will be calibrated in g/cm^3 unless you state otherwise.

Declaration

I declare that the information given above is true and complete to the best of my knowledge and belief, and I have taken all reasonable steps to ensure its accuracy.
